

## Concrete and Asphalt Crushing and Stockpile

RFQ# TR-32-2021-04

### Addendum 3

#### Lac La Biche County's Specifications for Buckshot Aggregate

The Buckshot produced must be a combination of crushed rock and screened pea gravel, screened to 5mm to 7mm in size.

- Pea Gravel is semi-round raw material and the Crushed Stone an angular material.
- Final product should have a 50/50 percent mix ratio of Pea Gravel and Crushed Stone. The County will consider a 40/60 percent mix ration finished product that is higher in crushed stone.
- Final product is to be clean, and free of sand, clays, and organic/deleterious materials.

The following chart shows the Lac La Biche County's grading requirements for 5mm - 7mm buckshot aggregate.

Sieve Analysis (% Passing by Weight)		
Sieve Size (mm)	Typical Result	Specification
12.70	100%	100%
7.00	93.4	85-100
5.00	10.8	10-30
2.38	1.1	0-10
2.00	1.0	0-15
